

# Analyzing the Relationship Between GDP, Public Education Expenditure, and Illiteracy Rates, Education Level, and Economic Activity Participation in Brazil, Colombia and Peru (2002–2020)

Canberk Arıcı

The background of the slide is a photograph of an open notebook with a silver pen resting on it, placed on a wooden surface. The notebook is open to a blank page, and the pen is a simple, sleek design. The lighting is soft, creating a professional and academic atmosphere.

03 Analysis

04 Conclusion

# Introduction

The background of the slide features a large, faint image of a person sitting and reading a book. The person is positioned on top of a large, golden coin. Several other similar golden coins are scattered around the base of the person, creating a sense of depth and scale. The overall image is semi-transparent, allowing the text to be clearly visible.

How do GDP and public expenditure on education relate to selected educational outcomes in Brazil, Colombia and Peru from 2002 to 2020, specifically in terms of illiteracy rates, population with 13 years or more of education, and economic activity participation among the population with 13 years or more of education?

- Year
- GDP per capita (current US\$)
- Public expenditure on education
- Population 15 years of age and older, by years of education
- Population 15 years of age and older participating in economic activity, by years of education
- Illiteracy rates

# Analysis

Brazil - GDP and Public Expenditure vs. Population with 13+ Years of Education (Percentage)

Colombia - GDP and Public Expenditure vs. Population with 13+ Years of Education (Percentage)

Peru - GDP and Public Expenditure vs. Population with 13+ Years of Education (Percentage)

# Conclusion

- GDP plays an important role in educational progress, while improvement in education access is needed in Brazil, Colombia, and Peru.
- Public expenditure on education appears to help reduce illiteracy and facilitate increased funding for education but in Colombia, there seems to be possible inefficiencies in education funding.
- A higher GDP does not always have a positive impact on education funding.
- While GDP and public expenditure on education positively correlate in Peru, Public Expenditure on Education shows fluctuations, suggesting that there may be challenges in sustaining education funding despite GDP growth.
- Population with higher levels of education is associated with higher rates of economic participation in all three countries.

**Limitations:** The absence of regional differences in education spending and other socio-economic factors that may influence educational outcomes.

**Further Research:** Further research is needed, incorporating other socio-economic factors that influence educational opportunities and outcomes.
